SUMMARY

Results-driven Frontend Developer with 6 years of experience building scalable, high-performance web applications. Specialized in React.js, Next.js, and TypeScript, with strong expertise in translating complex Figma designs into pixel-perfect, user-focused interfaces. Experienced in integrating cloud-based backends (Firebase, Appwrite) and optimizing performance to enhance user engagement and drive business outcomes.

TECHNICAL SKILLS

- Languages/Core: JavaScript (ES6+), TypeScript, HTML5, CSS3.
- Frameworks/Libraries: React.js, Next.js, Redux Toolkit, Context API, Zustand, GSAP (Animations)
- Styling: Tailwind CSS, Material UI, Chakra UI, Bootstrap.
- Backend: Firebase (Firestore/Auth), Appwrite(Database/Storage/Auth), REST APIs.
- Tools: Figma, WordPress, Wix.
- Platform: Linux, Git, GitHub, Vercel, VS Code.

WORK EXPERIENCE

London Jewish Forum, Volunteer

January 2026 –Present

- Designed and developed a responsive, user-friendly website to improve the organization's digital presence and accessibility across desktop and mobile devices.
- Translated detailed stakeholder requirements into functional UI components, implementing structured sections such as *Issues*, *Our Work*, *Elections & Hustings*, and *Community Initiatives*.
- Improved site navigation and layout by restructuring the header menu, optimizing spacing, and implementing a multi-row navigation system for better usability.
- Developed interactive features such as borough-based navigation and data tables for election tracking, enabling scalable updates, and improved user engagement. Implemented structured content systems for policy, community programs, and public events, supporting clear communication of organizational initiatives.

Frontend Developer (Internship), Achota Limited

June 2024 – July 2025

- Architected and deployed scalable, API-driven JavaScript applications, integrating Firebase Firestore for real-time data synchronization and secure user authentication.
- Engineered a library of reusable, visually consistent UI components using React, Tailwind CSS, and Material UI, significantly enhancing code maintainability and system responsiveness.

Frontend Engineer (Freelance)

June 2020 – July 2024

- E-commerce (Canine Sales): Developed a niche marketplace focusing on high-conversion UI and automated inquiry systems, facilitating seamless international buyer communications.
[Van Marijoli](#)
- Industrial Service Platform (KMK Techniques): Engineered a mobile-first HVAC booking system using a modular component architecture, ensuring 100% responsiveness across all device types.
[KMK Techniques](#)
- Vehicle Marketplace (Shurmans): Strategic lead on a technical migration to a WordPress environment, empowering the client with custom-built inventory management tools while maintaining a high-fidelity frontend.

PROJECTS

Caped – E-commerce Web Application	2026
Developed a high-performance, mobile-first e-commerce platform featuring dynamic product categorization, intuitive navigation, and a "seamlessly artistic" UI optimized for maximum user engagement.	
• Architected a high-performance storefront using Next.js, Tailwind CSS, Shadcn and TypeScript, adopting strict data contracts to eliminate runtime errors and ensure scalability. • Integrated Appwrite for a "backend-less" workflow, managing secure user authentication, session handling, and protected routing for admin dashboards. • Streamlined state management with Zustand, replacing Redux to reduce boilerplate and optimize real-time cart functionality and UI updates. • Engineered a modular Tailwind CSS component library from Figma designs, utilizing Next.js Dynamic Routing for SEO-optimized, on-demand product rendering.	
Caped	
Muhameds – Ecommerce website	2025
• Developed a full-scale e-commerce platform utilizing React Context API for seamless real-time cart management and secure checkout logic. • Engineered a custom Dark/Light mode system and optimized asset delivery to ensure high-speed rendering and accessibility on low-bandwidth connections.	
MedLabs	
Jobber – Career Portal	2025
• Engineered a dynamic job search engine utilizing the Adzuna API for real-time live listings and high-performance data fetching. • Developed a custom multi-category filtering system and a secure employer portal for job postings, leveraging a JSON-server architecture for efficient data management.	
Jobber	
HTC Booking – Travel & Hospitality Platform	2025
• Engineered a high-traffic travel booking SPA using React and Tailwind CSS, integrating the TripAdvisor API for real-time dynamic data fetching.	

- Implemented interactive Leaflet.js mapping and complex GSAP animations, creating an immersive, "storytelling" user journey with high-performance UI transitions.

EDUCATION

B.Eng. in Computer Engineering

Michael Okpara University of Agriculture, Umudike

Graduated: Oct 2024

- Grade: 3.54 / 5.0 (Second Class Upper Division)
- Engineering Foundation: Applied core engineering principles to software development, focusing on modular architecture and system efficiency.
- Extracurriculars: Engaged with Google Developer Technologies (GDG) on Campus MOUUAU, participating in developer circles to master modern web technologies and agile methodologies.

Final Year Project – Bluetooth-Based Smart Door Lock System

2024

- Designed and developed a wireless smart lock system using Arduino (ATmega) and HC-05 Bluetooth module.
- Programmed microcontroller in Embedded C for secure password authentication and device control.
- Integrated hardware components (relay, solenoid lock, regulated power supply) into a working system.
- Implemented multi-user access and password management for enhanced security.
- Built and tested a functional prototype with reliable real-time lock/unlock operations.
